

OLYMPIA EXPRESS PRICE LIST 2024 OLYMPIA MINA

VAT 7% EXCLUDED

Lightweight and mobile, yet robust and durable. We have also remained true to our values with the Mina. Made of aluminum, stainless steel and brass, just like its big sister the Cremina, it is built to last.

The vision for Mina is to be a constant travel companion, the machine comes with a sustainable case with an accessory compartment in a practical format. Mina works with a newly developed piston system, which, thanks to its design, makes it very easy to make a perfect espresso.

A specially designed construction in the brewing chamber ensures that good temperature stability is achieved and temperature losses can be reduced to a minimum. The finishing touch is a pressure indicator that allows extraction to be monitored at all times.

How to use:

Simply fill it with hot water and coffee powder and then you can lift the lever. The integrated valve lets the water hit the coffee puck. As soon as the lever is pressed down, it closes and allows pressure to build up.

This extraction process, together with the growing experience of the Mina owner, guarantees that perfect espresso in which crema, smell and taste create a harmonious pleasure for the eye, nose and palate.

Materials:

Made of aluminum, stainless steel and brass. Plastics are only used where necessary. From the lever guide and fork, which are made of electropolished stainless steel, to the anodized brewing head, whose surface hardness is close to ceramic, we have designed everything for durability. Wear parts are clearly planned and are very easy to replace.
